

Work2Work

The platform that truly relieves workshops.

Work2Work is a digital platform that strengthens workshops in three key areas: suitable orders, efficient procurement, and secure digitization. Workshops gain time, utilization, margin, and control over their data – without risk, without investments, without complicated adjustments.

Initial situation: Why workshops today unnecessarily lose time and money

- Unsuitable orders block lifts and slow down repairs.
- Discussions with fleets and customers cost time and nerves.
- Parts procurement is fragmented: multiple portals, manual comparisons.
- Phone inquiries and lack of transparency delay processes.

Higher utilization and less stress everyday

- More suitable orders instead of wrong orders.
- Higher utilization without downtime.
- Less stress through clear, planable processes.

Example: Utilization increases from 65% (Week 1) to 91% (Week 8).

Efficient procurement and automated communication

- Central search & parts trading: A platform for suppliers and workshops.
- Optimized procurement: Clear prices, availabilities, and conditions.
- Automated communication: Fleets see the status in real-time – fewer phone calls, fewer inquiries.

Data sovereignty, ecosystem, and future security

- Full control over data flows – no use of your data for foreign purposes.
- International data space standard – traceability and compliance.
- Open ecosystem instead of island solution: Work2Work integrates into existing workshop software, ERP, and supplier systems.
- AI-capable architecture: Ready for future AI processes that support workshops.

More earnings

- Better margins through optimized procurement.
- Higher utilization through suitable orders.
- Automation saves time – more billable hours, less administrative effort.

The key benefits for workshops

1 Better orders

- Only suitable orders for your workshop.
- Higher utilization, less downtime.

2 Efficient procurement

- Faster parts procurement from a single source.
- Trade parts among each other.
- Clear, fair prices without hidden costs.

3 Secure future

- Data sovereignty according to international standards.
- Future-proof, AI-capable architecture in an open ecosystem.
- Continuous development.

Work2Work – Strengthening the workshop

Work2Work gives you back control – over:

- Orders
- Time
- Data

Workshops support each other – regionally, fairly, based on skills. The result: less stress, higher utilization, better margins.

Fair conditions that fit every workshop

- Monthly fixed price.
- No minimum contract duration, cancelable at any time.
- No setup fees, no hidden costs.

Pay as you go:

You only use what you really need – small workshops pay little, larger businesses scale automatically.

Planable like a streaming subscription:

No investments in hardware or software, clear monthly costs.

Why Work2Work is particularly relevant for guilds

- Strengthens members through better utilization, margins, and efficiency.
- Promotes regional networks instead of competitive pressure.
- Secure, open ecosystem with data sovereignty as a fundamental principle.
- Lowers entry barriers for digitization – even for smaller businesses.
